822 Heat and Air Expands Commercial HVAC Ductwork and AC Repair Services

September 16, 2026

Benbrook, TX - September 16, 2026 -
822 Heat and Air has expanded its commercial and residential service offerings to include broader HVAC installation, ductwork solutions, and air conditioning repair across the Greater DFW Metroplex. The expansion positions the company to serve a growing base of large-scale commercial clients alongside its established residential customers throughout Fort Worth, Arlington, Dallas, and surrounding suburbs.

The heating and air conditioning contractor specializes in complete HVAC installation for both commercial buildings and residential homes. With the expanded services, the company now provides a fuller range of solutions that address the mechanical systems responsible for keeping indoor spaces comfortable and energy-efficient throughout the year.

A central part of the expansion focuses on ductwork, which plays a significant role in the overall performance of any heating and cooling system. Even a high-efficiency furnace or air conditioner can perform poorly when the air distribution system is leaking, damaged, or improperly designed. The company offers inspection and

diagnostics, duct repair, duct sealing, duct replacement, and duct design and installation for both commercial and residential properties.

Common problems addressed by the company include leaky or disconnected ducts, uneven heating or cooling between rooms, elevated energy bills despite a well-maintained system, excess dust, noisy air handling, and pests within the ducts. Signs that a system may require attention include rooms that are difficult to heat or cool, visible damage, and a system that runs constantly while leaving the home uncomfortable.

"Many homeowners and business owners invest in high-quality equipment without realizing that the air distribution system determines how well that equipment actually performs," said David, a spokesperson for 822 Heat and Air. "By expanding the commercial installation and repair services, the company can address the full system rather than a single component, which leads to more consistent comfort and better energy efficiency."

The expanded commercial services include installation, repair, and maintenance for commercial HVAC systems, designed to meet the heating, cooling, and ventilation needs of larger buildings. On the residential side, the company continues to provide system installation, repair, indoor air quality improvements, and AC tune-up services intended to prevent breakdowns and extend equipment lifespan.

"The goal behind the expansion is straightforward," David said. "Clients receive thorough inspections, clear explanations, and code-compliant work whether the project involves a small home repair or a large commercial installation. The company does not push replacement when a system can be effectively repaired."

822 Heat and Air emphasizes properly sized and code-compliant duct design, upfront pricing, and experienced technicians. The company serves Crowley, Burleson, Benbrook, Granbury, Joshua, Godley, Cleburne, Alvarado, Fort Worth, Arlington, Dallas, and communities throughout the Greater DFW Metroplex and suburbs.

822 Heat and Air is a professional heating, ventilation, and air conditioning company providing commercial and residential services. The company offers Commercial HVAC, Residential HVAC, ductwork, and AC tune-up services, using current technology and techniques to support indoor comfort and energy efficiency. Financing options are available subject to credit approval and offer eligibility. The company operates under license number TACLA65080C.
