

Collision Care Xpress Featured by Auto Body News for Technology-Driven Collision Repair

July 31, 2026

Pompano Beach, FL - July 31, 2026 -

Collision Care Xpress has been featured by Auto Body News in its Shop Stack Breakdown series, highlighting the company's technology-driven approach to collision repair, operational systems, OEM certification program, and continued investment in modern repair equipment at its Pompano Beach location.

The feature provides an in-depth look at the repair technologies, production systems, customer communication tools, and operational processes that support Collision Care Xpress as it continues expanding its certified collision repair capabilities across Florida and Puerto Rico.

Founded by Robert Molina in 2008, Collision Care Xpress has grown from a one-person operation into a multi-location collision repair organization with more than 20 original equipment manufacturer (OEM) certifications. The company now serves customers through locations in Pompano Beach, Daytona Beach, and Puerto Rico while continuing to invest in technician education, manufacturer-required equipment, and advanced repair technologies.

"We've always believed that investing in our people and in the right technology allows us to better serve our customers," said Robert Molina, Founder and CEO of Collision Care Xpress. "Being recognized by Auto Body News reflects the commitment our entire team has made to continuously improving our repair operations as vehicle technology continues to evolve."

According to the Auto Body News feature, Collision Care Xpress utilizes a layered technology strategy that integrates estimating, repair planning, production management, diagnostics, customer communication, and quality verification into a coordinated repair workflow. The publication highlights how the company's operational systems help support efficient repairs while maintaining the documentation required for today's increasingly complex vehicles.

One of the key areas featured is Collision Care Xpress's extensive OEM certification program. The company currently maintains more than 20 manufacturer certifications, including programs established by leading electric vehicle and luxury vehicle manufacturers. Maintaining these certifications requires ongoing technician training, specialized tooling, facility investments, and compliance with manufacturer repair standards that continue evolving as new vehicle technologies are introduced.

The article also highlights the company's commitment to advanced diagnostics and scanning technologies. Collision Care Xpress performs pre-repair scanning using OEM-specific diagnostic equipment and utilizes computerized alignment systems capable of supporting both wheel alignments and Advanced Driver Assistance Systems (ADAS) calibrations. According to the company, these technologies help technicians evaluate vehicle systems before, during, and after repairs while supporting manufacturer-informed repair procedures.

Another area recognized by Auto Body News is the company's investment in digital vehicle documentation. Every vehicle entering the Pompano Beach facility undergoes photo and video documentation, while a Hunter drive-through inspection system records alignment measurements and tire condition before repairs begin. This information becomes part of the repair documentation and helps establish a detailed record of the vehicle's condition throughout the restoration process.

The publication also examines how Collision Care Xpress approaches repair planning through specialized structural measuring technologies. Computerized measuring systems are used to evaluate structural damage before repairs begin, while additional precision measuring equipment assists technicians throughout the repair process. These technologies support repair planning while helping technicians monitor structural accuracy during restoration.

Operational efficiency is another major focus of the Auto Body News profile. Collision Care Xpress utilizes

multiple estimating and parts procurement platforms that allow repair teams to coordinate repairs based on insurer requirements, parts availability, and production needs. The company also continues developing proprietary customer communication tools designed to improve transparency and streamline updates throughout the repair process.

Beyond technology, the feature emphasizes Collision Care Xpress's employee-centered philosophy. Molina explains that while repair equipment continues advancing, experienced technicians remain the company's most valuable asset. Ongoing education, certification training, and operational support help prepare employees to repair increasingly sophisticated vehicles while maintaining consistent repair quality across every location.

The article also notes the company's philosophy of investing in capabilities that improve both repair quality and operational efficiency. Rather than continuing to outsource frequently requested services, Collision Care Xpress has strategically invested in equipment that allows more repair procedures to be completed in-house. According to Molina, this approach supports workflow efficiency while expanding the company's ability to perform certified repairs.

As vehicle manufacturers continue introducing advanced safety systems, lightweight materials, electric vehicle platforms, and increasingly sophisticated repair procedures, Collision Care Xpress expects technology investments to remain a central part of its long-term growth strategy. The company continues evaluating emerging repair technologies while expanding the infrastructure necessary to support evolving manufacturer requirements.

Collision Care Xpress views its recognition by Auto Body News as an acknowledgment of the company's long-term commitment to operational excellence, technician development, and technology-driven collision repair. The feature reflects the ongoing investments the organization has made to support customers, employees, and manufacturer-certified repair programs as the collision repair industry continues evolving.
